Wednesday, April 19th

1:30-3 AKST/2:30-4 PST

Join this meeting on  
Teams.

This webinar will be presented by the Chugach Regional Resource Commission and will share the findings of a new report about climate and non-climate stressors to Alaska Natives in Prince William Sound and Adjoining Kenai Peninsula.

The webinar will be recorded and made available afterwards.

Findings of the report include:

- Alaska Native communities are dependent on natural resources nutritionally, economically, and culturally.
- Foods Alaska Natives rely on are expected to decrease with climate change.
- This study suggests focusing on resilience in traditional resources by developing both community-grown foods and enhancing local natural resources through habitat management and monitoring.
